

Number 1 for Platforms & Loading Systems

- ▶ 80% improvement in throughput and 50% reduction in cost
- ▶ Hoist and advanced Rolling Platforms
- ▶ Self contained "LoadSwift" loading system solution
- ▶ Full in-house design and manufacture

Introducing... Xena Systems

Xena Systems pioneered the use of fixed and patented rolling loading platforms as a productivity tool in fitting out multi storey structures.

Lifting the Standard

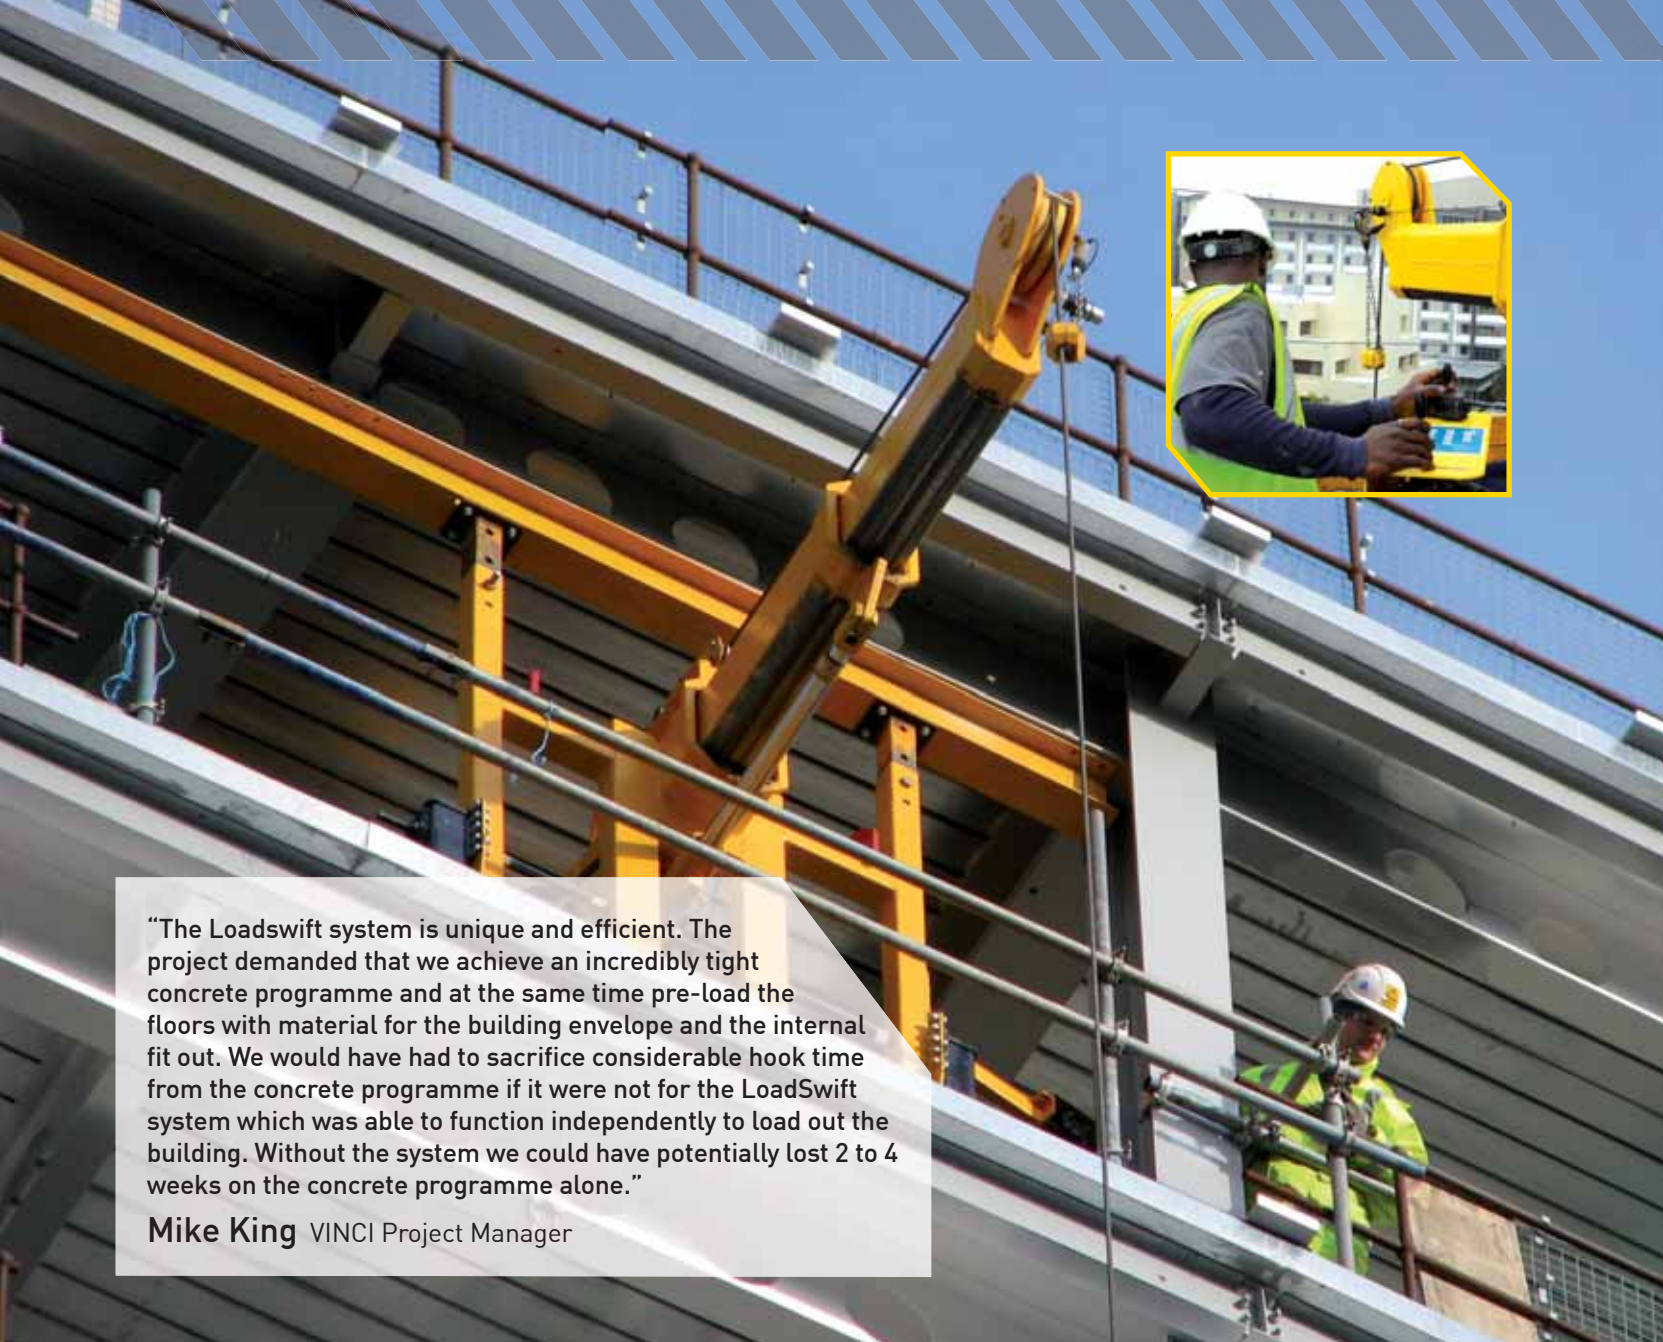

Xena Systems was the first to offer combination crane and loading platform solutions that release fixed tower cranes for other tasks, creating a truly cost effective loading system. With the support of its customers, Xena Systems are able to deliver great customer service solutions

We develop long term relationships with our clients, working in true partnership to deliver class leading productivity with the highest levels of safety. With involvement at project planning stage through to load out completion, we provide a total service.

By working at the planning stage, we can help you optimise your loading process. By planning correctly we can demonstrate savings of up to 50% in cost and 80% in time over conventional loading techniques. The Loadswift loading system was specifically developed with key clients to achieve these targets.

“We had a number of structural issues that Xena Systems assisted in resolving, and the whole concept was both a learning experience and a relaxed team effort. From day one Xena Systems have been professional and helpful and the project would have been delayed had other methods of loading been introduced. We have since started loading the building very quickly and have maintained our estimated programme time for the operation”.

David Booth
Project Manager

“The Loadswift system is unique and efficient. The project demanded that we achieve an incredibly tight concrete programme and at the same time pre-load the floors with material for the building envelope and the internal fit out. We would have had to sacrifice considerable hook time from the concrete programme if it were not for the LoadSwift system which was able to function independently to load out the building. Without the system we could have potentially lost 2 to 4 weeks on the concrete programme alone.”

Mike King VINCI Project Manager

STAGE 1

Boom is moved outward to pick up load and the Hook is attached to load.

STAGE 2

Load is hoisted to just above the platform ready to be loaded on to the deck.

STAGE 3

Platform is easily rolled out and Load is lowered safely to the deck.

- ▶ 80% improvement in throughput and 50% reduction in cost
- ▶ Hoist and advanced Rolling Platforms
- ▶ Self contained “LoadSwift” loading system solution

The Loading Solution Delivering Real Savings

DESIGN ❖❖❖

Working in partnership with site teams from an early stage we tailor the products directly towards maximising efficiency on projects. We are able to immediately integrate our products into your designs and demonstrate their effectiveness. With our own design teams we respond rapidly to changes at all stages. All our designs comply with known British, Australian and USA OSHA standards.

MANUFACTURING ❖❖❖

With international manufacturing and shipping we can supply projects with bespoke equipment on short timescales. High levels of quality control are ensured in all our plants by dedicated trained teams.

All of our equipment is used in our own hire fleet in Europe and customer feedback used to improve our products directly.

SAFETY ❖❖❖

With over 2.5 M safe loading hours on our own hire fleet, our product designs show that we engineer in high levels of safety from day 1.

We provide all the documentation necessary to install, operate and maintain our products safely in the field as part of our support package to all new customers
